FOCUSON

designed by Faro Lab

Lily is a collection of bollards and spikes with high decorative value and a distinctive architectural gesture. Its minimalist structure, shaped like an angled arm, elevates and positions a small triangular light that illuminates only what is essential, accentuating vegetation and highlighting textures with precision. By day, its forms adds in movement and expressiveness to the garden; by night, its silhouette fades into the darkness, making the light appear to emerge from nature itself.

It emits light exclusively downward to avoid glare and light pollution, protecting the environment.

Its warm light (2700K), integrated and hidden, sets up a cozy atmosphere that is respectful of plants and people. Made of stainless steel with a glass diffuser, it ensures durability and turns outdoor spaces into intimate and attractive settings.

Anti-glare

Lily es una familia de balizas y estacas con un alto valor decorativo y un gesto arquitectónico distintivo. Su estructura minimalista en forma de brazo inclinado eleva y desplaza un pequeño foco triangular que ilumina solo lo esencial, acentuando la vegetación y resaltando texturas con precisión. De día, sus formas aportan movimiento y expresividad al jardín; de noche, su silueta se disuelve en la oscuridad, haciendo que la luz parezca surgir de la propia naturaleza.

Emite luz únicamente hacia abajo para evitar deslumbramientos y contaminación lumínica, cuidando del entorno.

Su luz cálida (2700K), integrada y oculta, crea un ambiente acogedor, respetuoso con plantas y personas. Fabricada en acero inoxidable con difusor de vidrio, garantiza durabilidad y transforma los espacios exteriores en escenarios íntimos y atractivos.

“Lily transforms the garden into a captivating interplay of light and movement, where minimalist architecture gracefully blends with nature, creating a magical atmosphere that enchants both by day and night.”
